Probability Models A
probability model is a
mathematical
representation of a
random phenomenon.
It is defined by its
sample space, events

space, and

probabilities associated
with each event.. The
sample space S for a
probability model is the
set of all possible
outcomes.. For

The sigmoid function yields the following plot: Figure 1: Sigmoid function. If z represents the output of the linear layer of a model trained with logistic regression, then $\text{sigmoid}(z)$ will yield a value (a probability) between 0 and 1. In mathematical terms:

Logistic Regression: Calculating a Probability

Probability is a measure quantifying the likelihood that events will occur. Probability is a number between 0 and 1, where, roughly speaking, 0 indicates impossibility and 1 indicates certainty. The higher the probability of an event, the more likely it is that the event will occur.
