Control over GB kinetics provides effective means to tailor polycrystal properties through material processing. While many approaches describe different GB kinetic phenomena, this review provides a unifying concept for a wide range of GB kinetic behavior. Our approach rests on a disconnection description of GB kinetics.

This was admittedly to bridge the gaps in the various proposals which, if left unaddressed, would encourage uncoordinated measures (paragraph 7, Secretariat Proposal for ...

INSIGHT: The OECD Unified Approach—an Indian Perspective

In response, various methods have recently been proposed to help users interpret the predictions of complex models, but it is often unclear how these methods are related and when one method is preferable over another. To address this problem, we present a unified framework for interpreting predictions, SHAP (SHapley Additive exPlanations).
