### **Animal Cognition Evolution Behavior And**

Animal cognition describes the mental capacities of non-human animals and the study of those capacities. The field developed from comparative psychology, including the study of animal conditioning and learning. It has also been strongly influenced by research in ethology, behavioral ecology, and evolutionary psychology, and hence the alternative name cognitive ethology is sometimes used.

### **Animal cognition - Wikipedia**

The philosophical issues that relate to research on animal cognition can be categorized into three groups: foundational issues about whether non-human animals are the proper subject of psychological investigation; methodological issues about how to study animal minds; and more specific issues that arise from within the specific research programs.

### **Animal Cognition (Stanford Encyclopedia of Philosophy)**

Collective animal behavior is a form of social behavior involving the coordinated behavior of large groups of similar animals as well as emergent properties of these groups. This can include the costs and benefits of group membership, the transfer of information across the group, the group decision-making process, and group locomotion and synchronization.

Evolutionary Anthropology Talk Series (EATS) EATS is the Evolutionary Anthropology department's weekly seminar. We host a mix of external faculty and student invited speakers, and also showcase the work of our own students and faculty.

### **Evolutionary Anthropology**

Questions about animal consciousness — in particular, which animals have consciousness and what (if anything) that consciousness might be like — are both scientific and philosophical. They are scientific because answering them will require gathering information using scientific techniques — no amount of arm-chair pondering, conceptual analysis, logic, a priori theory-building ...

Introduction. The topic of emotion and evolution typically brings to mind Darwin's classic treatise, Emotions in Man and Animals (Darwin, 1872). In this book Darwin sought to extend his theory of natural selection beyond the evolution of physical structures and into the domain of mind and behavior by exploring how emotions too might have evolved.
