In statistics, asymptotic theory, or large sample theory, is a framework for assessing properties of estimators and statistical tests. Within this framework, it is typically assumed that the sample size n grows indefinitely; the properties of estimators and tests are then evaluated in the limit as $n \rightarrow \infty$. In practice, a limit evaluation is treated as being approximately valid for large finite ...

Significance testing refers to the use of statistical techniques that are used to determine whether the sample drawn from a population is actually from the population or if by the chance factor. Usually, statistical significance is determined by the set alpha level, which is conventionally set at .05. Inferential statistics provide the test statistics and significance level of the analysis ...
