Atwood Furnace Won't Ignite. Question: I
have a 2001 Teton with an Atwood
model 8531-IV-DCLP that won't ignite.
The blower and propane solenoids are
working fine and I'm getting a 63-65 volt
reading on the igniter wire using a
digital voltmeter (with the igniter wire
connected at both ends).

Some common reasons why the Hydro Flame furnace in your RV isn't working include improper voltage levels, dirt inside the blower wheels, and malfunctions involving individual moving parts. If voltage levels at the furnace are too low, the blower will not have enough power to run and produce heat; if too high, the circuit breaker may trip.

Troubleshooting the RV Furnace. Time delay relay (Used on older furnaces, newer furnaces have the relay incorporated into the circuit board) This relay performs two separate jobs - one to handle the relatively high current needed to run the blower motor - and two, to allow the blower to run for 45 to 90 seconds after the thermostat is satisfied.
