In this guide, we're going to configure a Cisco switch through the command-line interface (CLI) with the open-source SSH/Telnet client PuTTY (although you can use another tool if you prefer). If for any reason putty is not an option for your setup, you can get similar results with a PuTTY alternative .

~~Switch Configuration: Cisco Catalyst 2950—YouTube~~

The Catalyst 2950 switches are a family of Ethernet switches that end-user can use to connect workstations and other network devices, such as servers, routers, and other switches. All models of the switch are cluster-capable, but only some models are stackable. end-user can use switches with gigabit interface converter (GBIC) module slots to create switch stacks by using Gigastack GBICs.

~~Cisco Catalyst 2960 Series Switches—Configuration Guides~~

Although a Cisco switch is a much simpler network device compared with other devices (such as routers and firewalls for example), many people have difficulties to configure a Cisco Catalyst Switch. Unlike other lower class switch vendors (which are plug-and-play), the Cisco switch needs some initial basic configuration in order to enable management, security and some other important features.
