healthy condition.

International Journal of High-Rise Buildings

As building and material science advanced, tall buildings were designed on a tube system rather than a rectangular design of the earliest skyscrapers. The tube works well to a point - the width and depth must rise in proportion with the height. Pretty soon you end up with millions of square feet of mostly undesirable office space.

The Building Technology Behind a Mile High Skyscraper

Below we've broken down 17 of the most innovative advancements in the construction technology you're likely to see in the coming years. 1. LiDAR. Thanks to LiDAR, or light detection and ranging, sensors mounted on construction equipment can scan the surrounding worksite and produce high-resolution 3D images in real-time.

CLASSIFICATION OF TALL BUILDING
STRUCTURAL SYSTEMS □ Can be
classified based on the structural
material used such as concrete or steel
□ Structural systems of tall buildings can
also be divided into two broad
categories: □ 1) INTERIOR STRUCTURES □
2) EXTERIOR STRUCTURES □ This
classification is based on the distribution
of the components of the primary lateral
load-resisting system over the building.
