Replication. Hydrogen bonds break easily, making it easier for the two strands in the molecule to separate during replication. The strong covalent bonds ensure that the sequence of nucleotides remains fixed in each strand.

...

Scientists had known for a very long time that organisms make copies of their DNA.

Read Online Dna Replication

Making extra copies of the instructions in DNA allows an organism to grow and reproduce. The scientific word for 'copy' is 'replication.' So when we talk about DNA making copies of itself, we call it DNA replication.
