The most efficient types of network used in the embedded system are BUS network and Ethernet network. A BUS is used to connect different network devices and to transfer a huge range of data, for example, serial bus, I2C bus, CAN bus, etc. The Ethernet type network works with the TCP/IP protocol.

## **Importance of Network in Embedded Systems for Beginners**

Embedded networks utilise traditional building infrastructure to deliver utility services to end users, whilst creating ongoing income streams that can benefit building owners, building managers, residents and tenants. If your site is a multi-tenanted complex, an embedded network may be a great option for you.
