The urinary system consists of the kidneys, ureters, urinary bladder, and urethra. The kidneys filter the blood to remove wastes and produce urine. The ureters, urinary bladder, and urethra together form the urinary tract, which acts as a plumbing system to drain urine from the kidneys, store it, and then release it during urination.

*Excretory System - Definition, Function and Organs ...*

HUMAN EXCRETORY SYSTEM. The function of kidney is to remove the waste materials present in the blood in the form of yellowish liquid called urine. As shown in Fig. 14 each kidney is covered by a layer of fibrous tissue called renal capsule. The renal capsule protects the kidneys from injuries and infection.
