grep(1): print lines matching pattern - Linux man page

grep is a command-line utility for searching plain-text data sets for lines that match a regular expression. Its name comes from the ed command g/re/p (globally search a regular expression and print), which has the same effect: doing a global search with the regular expression and printing all matching lines. grep was originally developed for the Unix operating system, but later available for ...

---

grep - Wikipedia

The grep command which stands for “global regular expression print” is one of the most powerful and commonly used commands in Linux.. Grep searches one or more input files for lines that match a given pattern and writes each matching line to standard output. If no files are specified, grep reads from the standard input, which is usually the output of another command.

---

15 Practical Grep Command Examples In Linux / UNIX

From "man grep": three variant programs egrep, fgrep and rgrep are available. egrep is the same as grep -E. fgrep is the same as grep -F. rgrep is the same as grep -r. Direct invocation as either egrep or fgrep is deprecated, but is provided to allow historical applications that rely on them to run unmodified.

---

Linux Tutorial - 10. Learn Grep and Regular Expressions

GNU grep isn't faster with -F, for example (it also has a bug that makes grep -F slower in multibyte locales — the same constant pattern with grep is actually significantly faster!). On the other hand BusyBox grep does benefit a lot from -F on large files. – Gilles 'SO- stop being evil' Jul 22 '14 at 8:53
