Human Footprints On The Global

The Human Footprint is a quantitative analysis of human influence across the globe. In this map, human impact is rated on a scale of 0 (minimum) to 100 (maximum) for each terrestrial biome. A score of 1 indicates the least human influence in the given biome.

The Human Footprint | Earthdata

By adding up all of those withdrawals, we can calculate the human footprint on the planet—a measure of how much we are using the Earth's natural resources. The withdrawals come in six categories: Carbon: A measure of carbon emissions, represented by the amount of forest land that would be needed to sequester carbon dioxide emissions, not including the fraction that is absorbed by the ...
