Infrastructure Systems | ASCE Library

Infrastructure is the foundation or framework that supports a system or organization. In computing, information technology

infrastructure is composed of physical and virtual resources that support the flow, storage, processing and analysis of data.

Infrastructure may be

Mechanical, electrical and plumbing (MEP) refers to these aspects of building design and construction. In commercial buildings, these elements are often designed by a specialized engineering firm. MEP design is important for planning, decision making, accurate documentation, performance- and cost-estimation.
