In physics, cryogenics is the production and behaviour of materials at very low temperatures.. It is not well defined at what point on the temperature scale refrigeration ends and cryogenics begins, but scientists assume a gas to be cryogenic if it can be liquefied at or below $-150\text{ }^{\circ}\text{C}$ (123 K ; $-238\text{ }^{\circ}\text{F}$). The U.S. National Institute of Standards and Technology considers the field of ...
