Mathematical finance, also known as quantitative finance and financial mathematics, is a field of applied mathematics, concerned with mathematical modeling of financial markets. Generally, mathematical finance will derive and extend the mathematical or numerical models without necessarily establishing a link to financial theory, taking observed market prices as input.

[Texas TEKS Mathematical Models With Applications](#)

Personal Finance is the management of an individual or family's financial situation, with saving money for future payments, predicted or unexpected, normally assessed as the main goal. These goals can be short-term or long-term depending on the need and the situation of a person.
