employs carbon dioxide starting material. Asahi Kasei Chemicals has built a business globally licensing its non-phosgene process for PC using carbon dioxide as a feedstock. Validation of the new process will enable the company to license it as the intermediate process for DPC, thereby strengthening the competitiveness of the licensing business.

(DMC) is an organic compound with the formula $\text{OC}(\text{OCH}_3)_2$. It is a colourless, flammable liquid. It is classified as a carbonate ester. This compound has found use as a methylating agent and more recently as a solvent that is exempt from the restrictions placed on most volatile organic compounds (VOCs) in the US.
