Pathology Outlines - PathologyOutlines.com

The goal of histology is to not only understand the microanatomy of cells, tissues, and organs, but also to understand their function in structural terms. Studying the histology of the digestive system will complement the study of its gross anatomy and provide the structural basis for learning digestive physiology in lecture.

Multiple sclerosis can be pathologically defined as the presence of distributed glial scars in the central nervous system that must show dissemination in time and in space to be considered MS lesions. The scars that give the name to the condition are produced by the astrocyte cells healing old lesions. These glial scars are the remainings of previous demyelinating inflammatory lesions which are produced by one or more unknown underlying conditions. Apart of the disseminated lesions that define t

Pathology of multiple sclerosis - Wikipedia

Such groups of cells are known as tissues, of which there are four basic types: epithelial, connective, muscular and nervous. The term "histology" comes from the Greek word meaning "the study of tissues". The four basic tissues form associations in various ways to make all the organs of the body, which are in turn organized into systems.

Introduction to the Histology Course

Basic Histology begins with a brief introduction to histological methods for light microscopy and describes the general principles of immunocytochemistry, transmission electron microscopy (TEM), and scanning electron microscopy (SEM). The course then goes on to discuss the characteristic morphologies of various cell

Normal Histological Features: The gastric mucosa consists of surface epithelium, gastric pits and gastric glands. The gastric glands extend from the muscular mucosae to extend into the stomach lumen via gastric pits. The foveolar cells lining the surface and gastric pits are identical throughout the stomach.

An Outline of the Anatomy and Normal Histology of the ...

Histopathology refers to the microscopic examination of various forms of human tissue. Specifically, in clinical medicine, histopathology refers to the examination of a biopsy or surgical specimen by a pathologist, after the specimen has been processed and histological sections have been placed onto glass slides.

Pathology - Wikipedia

Histology is the study of the cellular organization of body tissues and organs. The term is derived from the Greek "histos" meaning web or tissue, and refers to the "science of tissues".
