There are hundreds of native plant communities - forests, prairies, wetlands and savannas are just the four basic Midwestern types; they can be further divided into many unique and specific sub-types. Individual species may be found in just one specialized community, several communities or even many communities.

Prairie potholes are depressional wetlands (primarily freshwater marshes) found most often in the Upper Midwest, especially North Dakota, South Dakota, Wisconsin, and Minnesota. This formerly glaciated landscape is pockmarked with an immense number of potholes, which fill with snowmelt and rain in the spring.

Distribution of Illinois
Prairies In 1820, Illinois
had 22 million acres of
prairie land and 14
million acres of forests.
Prairies were mainly in
the northern two-thirds
of the state with
forests in the southern
one-third. All but nine
counties had large
areas of prairies.
