Pebblebrook High School Home Page

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

Cell (biology) - Wikipedia

Reductionism encompasses a set of ontological, epistemological, and methodological claims about the relations between different scientific domains.

The cell (from Latin cella, meaning "small room") is the basic structural, functional, and biological unit of all known organisms. A cell is the smallest unit of life. Cells are often called the "building blocks of life". The study of cells is called cell biology, cellular biology, or cytology.. Cells consist of cytoplasm enclosed within a membrane, which contains many biomolecules such as ...

Buoyancy: Calculating Force and Density with Archimedes ...

The topic of scientific revolutions has been philosophically important since Thomas Kuhn's account in The Structure of Scientific Revolutions (1962, 1970). Kuhn's death in 1996 and the fiftieth anniversary of Structure in 2012 have renewed attention to the issues raised by his work. It is controversial whether or not there have been any revolutions in the strictly Kuhnian sense.

Peripheral Nervous System - Biology Encyclopedia - cells ...

Epistemology. Epistemology is the study of knowledge. Epistemologists concern themselves with a number of tasks, which we might sort into two categories. First, we must determine the nature of knowledge; that is, what does it mean to say that someone knows, or fails to know, something? This is a matter of understanding what knowledge is, and how to distinguish between cases in which someone ...
