It is always a good idea to make such scatter plots: visually inspecting the data can lead us to find problems with data coding such as inputting 100 instead of 10 for a single participant. Warning: This plot will be available from JASP version 0.12 onwards. The theoretical mediation model is shown in the image

We can plot multiple bar charts by playing with the thickness and the positions of the bars. The data variable contains three series of four values. The following script will show three bar charts of four bars. The bars will have a thickness of 0.25 units. Each bar chart will be shifted 0.25 units from the
