Solid materials can be classified according to a variety of criteria.

Among the more significant of these is the description of a solid as being either crystalline or

amorphous. The solid state physics

community has tended during the period from the mid-1940's to the late 1960's to

CHAPTER 1. The vectors $\hat{x} + \hat{y} + \hat{z}$ and $-\hat{x} + \hat{y} + \hat{z}$ are in the directions of two body diagonals of a cube. If θ is the angle between them, their scalar product gives $\cos \theta = -1/3$, whence $\theta = \cos^{-1}(-1/3) = 109^\circ 28'$. The plane (100) is normal to the x axis.
