Procedure B: Stoichiometry of Several Salts. Post-lab Questions: Top. Based on your experimental data, does the stoichiometry of a product of a chemical reaction depend upon the amounts of reactant available to form the product? Cite experimental evidence to support your answer. Does the stoichiometry of a salt ...

The purpose of stoichiometry is to be able to calculate and predict how much product can be produced from certain reactants. We used stoichiometry to calculate the grams of baking soda we were supposed to use, as well as predict the amount of products we would create. Pre-Lab. Before we could do the lab we

From the moles of hydrogen gas the moles of metal can be calculated via stoichiometry and the chemical equation shown above. In Part I of this experiment the moles of zinc will be divided into the mass of zinc to obtain an experimental value for the molar mass of zinc.
