Dale F. Rudd (1935–2018) was an American Chemical Engineer and Donald C. Slichter Professor Emeritus of Engineering Research at the University of Wisconsin–Madison. He is known for his influential work in process engineering, in particular for introducing computer aided process synthesis design strategies for large scale chemical industries.

Dale F. Rudd - Wikipedia

Process engineering is the understanding and application of the fundamental principles and laws of nature that allow us to transform raw material and energy into products that are useful to society, at an industrial level. By taking advantage of the driving forces of nature such as pressure,

temperature and concentration gradients, as well as the law of conservation of mass, process engineers can develop methods to synthesize and purify large quantities of desired chemical products. Process engi
