Contaminated food and drink are common sources for the introduction of infection into the body. The table below shows some of the more common parasitic infections that travelers can acquire from contaminated food and drink, as well as a few of the less common parasitic diseases that travelers are at risk for acquiring.

CDC - Parasites - Travelers

These parasites further rob their human hosts of blood and nutrients; it is easy to understand how they can affect the physical and mental development of children and the ability of adults to work. Hookworm infections occur mostly in tropical and subtropical climates.

ASTMH - Major Tropical Diseases

Parasitic infections. In tropical countries, parasitism is endemic. Roundworms, tapeworms, amoebae, hookworms, strongyloides, threadworms, and blood flukes (schistosomiasis) are the main types of parasites. Consequently it is commonplace in these areas for multiple parasite infestation to occur in addition to other disorders.

Opinion | Parasites in Paradise - The New York Times

Tropical diseases are diseases that are prevalent in or unique to tropical and subtropical regions. The diseases are less prevalent in temperate climates, due in part to the occurrence of a cold season, which controls the insect population by forcing hibernation. However, many were present in northern Europe and northern America in the 17th and 18th centuries before modern understanding of ...

Tropical disease - Wikipedia

Ultrasonographic abnormalities possibly due to tropical and parasitic diseases are shown in the table. Although ultra-sonographic criteria alone do not permit diagnosis of amoebic liver abscesses and their differentiation from bacterial abscesses, a diagnosis can be made non-invasively if the patients' history and clinical status is considered.
