Since my Wiimotes didn't want to sync anymore after the video reset + change resolution in the system settings to 480p, there seems to be more going on. But I've read that's the sign of a bricked Wii (black screen plus wiimotes not syncing anymore), but not sure if it's a software or hardware issue in this case.

This option adjusts the aspect ratio and not the television resolution. The television's options must also be adjusted to take advantage of its own widescreen mode, even when receiving widescreen input from the Wii console. Refer to your television's manufacturer or user's guide for more information. Complete these steps. Access System Settings.
